

Camco Technologies – Software Engineer - GRADUATES SEPTEMBER 2026 From road to vessel

Position

Are you a final-year student graduating in 2026 in ICT or Computer Science? Do you want to start your career in September 2026 in a high-tech environment, developing software with international impact and working on complex technical challenges?

As a **Junior Software Engineer**, you will join an experienced software team from day one and work on:

- Full stack development in C#, .NET, TypeScript, Angular, React
- Translating complex functional requirements into technical design and/or implementation
- Testing, debugging, and optimizing software for performance and scalability
- Contributing to architecture, code quality, and maintainability

Two tracks within the software team

At Camco Technologies, software engineers can start in two complementary tracks:

- **Product Team:** focused on building and improving core software products. This track is highly technical, with deep backend development, software architecture, and complex programming challenges.
- **Project Team:** focused on implementing software at customers worldwide. This track requires strong social skills, communication, and project management, with a steep learning curve due to direct customer interaction.

Horizontal mobility between tracks is possible. Candidates with a preference are encouraged to mention it in their motivation letter.

Profile

We are looking for **high-potential engineers** who can tackle complex challenges, learn fast, and take ownership:

- Graduating in 2026 with a master in ICT / Computer Science (must)
- Available to start in September 2026
- Basic knowledge of C# or a similar object-oriented language, with interest in deep backend development
- Familiarity or interest in TypeScript and at least one modern front-end framework (Angular, React, Vue)
- Knowledge of HTML5 and CSS3
- Analytical, problem-solving, and eager to learn

- Team player, communicative, and results-oriented
- Proactive and flexible mindset: you take initiative, think along, take responsibility, and can adapt when international meetings or deadlines occur outside regular working hours (no 9-to-5 mentality);
- Professional attitude
- Fluent in Dutch and English; other languages are a plus

Motivation, eagerness to learn, professional attitude, flexible mindset and technical potential are decisive; prior experience is not required.

Why choose Camco Technologies?

At Camco Technologies you will have the opportunity to grow from day one in a stable, technologically environment.

What you can expect:

- Steep learning curve: both technically (deep backend, full-stack, software architecture) and in projects (implementation, customer interaction, project management)
- International experience: from day one, you will be involved in international projects
- Visible impact: the software you build or implement directly affects real-life processes and terminal operations
- Challenging and diverse role in a growing, innovative tech company (230+ employees)
- Flexible working hours and possibility to work from home
- Team & culture: work with 30+ experienced software engineers in a collaborative environment that values open communication, initiative, and personal growth

At Camco Technologies, you're not just starting your first job, you're building a career with international impact, technical depth, and fast personal growth.
